Projects

1. PHP Projects

- (Group Project) was a part of a team where we develop a parking area reservation system which helps to reduce the tension of finding a parking area inside a Kathmandu valley.
- Develop a single vendor e-commerce website where customer can buy a different type of vegetables from the comfort of their home. This system consists of two modules Admin module and Customer module.
- Develop a Hospital Management System where all the work related to the hospital (i.e. Patient registration, Taking appointment of doctors, Soft-copy of patient medical report etc.). This system consists of Three modules Admin Module, Receptionist Module and Doctor Module.
- (Group Project) was a part of a team where we develop a dynamic news-portal website according to the client requirement.

2. React Projects

- Develop a To-do list application
- Develop a COVID-19 stat showing system that display the data of all the country by fetching data from API.
- Develop a personal Portfolio website using react-router
- Develop a system to show the current weather of their city
- Clone Sastodeal Homepage design on React

**All my above-mentioned projects are on my GitHub profile.*
